Kleinwort Hambros Elite Multi Asset Balanced Fund A GBP Inc

Morningstar Rating™

Investment Objective

The primary investment objective of the Balanced strategy of the Cell is to generate a real return exceeding the rate of inflation, while accepting a relatively moderate level of risk similar to the long-run historical risks of investing in a blended portfolio of 50% bonds and 50% equities.

Fund Manager Commentary

US investors reappraised their interest rate expectations during April as inflation proved to be stubbornly persistent, with the CPI rising to 3.5%. While US economic activity slowed the Fed may have to delay rate cuts to later in the year. Consequently, the US 10year bond yields rose by around 40bps to 4.6% during the month. UK inflation continues to decelerate, falling to 3.2% in March. Next month, UK CPI will fall significantly again towards 2% as energy prices fall. UK Composite PMI survey came in at 54, a level which usually indicates quarterly GDP growth of c.0.4%, this may limit the Bank of England's ability to cut rates. European PMI surveys are picking up across the Continent but in a more subdued fashion as the manufacturing sector continues to see patchy demand from China in particular. As such, monetary easing may well commence before the end of the second quarter. The fund's equities were the main driver of returns impacted by their US exposure, though the UK and emerging market positions offset some of this. Fixed income was a modest detractor with government and investment grade bonds negatively impacted by their duration positioning. Alternatives were broadly flat over the period.
